2W is a locally owned company located in Nanton, Alberta, the heart of cattle country, 80 kilometers south of Calgary. The company is committed to providing top quality livestock handling equipment for the cattle, horse, bison and rodeo industries at affordable prices.

All of the equipment is powder coated for a long lasting and durable finish. Our steel is ASTM A-500 grade approved tube, it is a hot rolled structural application where strength, not appearance is required.

2W Steel Tube Index

Diameter	Gauge	Wall Thickness (Inches)
2 3/8"	11	0.125
2" x 4 5/8" (oval)	13	0.095
2"	13	0.095
2"	16	0.065
1 1/2"	14	0.083
1 1/4"	14	0.083
1" Square	16	0.065

2W has developed an extensive distributor network throughout Western Canada, the United States and Sweden. New markets and products are constantly being sought and developed which keeps 2W on the leading edge in its market. In order to keep up with the growing demands and needs of today's livestock producers.

GENERAL PURPOSE GATES

Our general purpose gates come in three variations; Farm, Thrifty, and Fence Line.

These gates are great for low to medium stress areas such as driveways and pasture openings.

- » Heavy Hinges for added durability - 1" Threaded Rod (13" long)
- 2" Gates Collars .145" wall thickness / 1.5" Gate Collars .154" wall thickness
- » Our most popular multipurpose gate is our Farm Gate built with 5 rails
- » Our lightest duty option would be our Fence Line Gate.
- » Our Thrifty Gate is a mix between Farm and Corral Gates.
- » Gates mount standard 12" from the ground and come with chain latch
- » Add a horse back latch or plunger to any gate or 2-way Sure Latches are also available

MEDIUM DUTY J-LEG PANELS

2W LEMSCO SERIES 1 ½", 14 GAUGE

J-Leg Panels are easily identifiable with the legs of the panel self explanatorily shaped like a "J". Our J-leg panels are solely available in our medium duty Lemsko series. The reasoning behind the "J" shape is to prevent the panel from sinking into the ground. All made with our 1 ½", 14 gauge steel, making it the strongest in its market.

HEAVY DUTY POSTS

(400, 500, 600) 2 3/8" POST PIPE

2W's Heavy Duty Posts are steel posts with pins and clips to hook up to any heavy duty equipment. The benefit of using posts versus postless panels is the flexibility it creates when building more pens.

The posts also create more stability to your design and provides the opportunity to decide whether it is best to put spreader bars and posts. Required for Heavy Duty 400, 500 and 600 series.

*Post anchor options are available for added stabilization and permanent set ups.

HEAVY DUTY SPREADER POSTS & BARS

The Spreader Bars and Posts are essential for alley stabilization and maintaining the desired width in back pen or alley systems. This will help to achieve optimal stability.

We have 2 heights of spreader posts available to attach to your spreader bars. Choose from 7'8" or 9'6" to accommodate horseback riders or those on foot. The Spreader Bar is designed to sit over and/or under the posts for easy installation. It is recommended to have spreader bars on the top and bottom.

Cattle handling facilities are an essential part of any successful cattle operation. We understand every producer's needs and situations are different. 2W prides itself on providing well-built, functional products to promote easy, safe and stress-free handling of your livestock. 2W systems are designed to use cattle's instinctive behaviors requiring less people to process animals with minimal stress to both livestock and handler. Investing in quality products that focus on critical components such as a good squeeze, sturdy gates and latches will result in happier cows and a better bottom line for you.

** A consultation with one of our design specialists will ensure a configuration that is most cost effective and efficient for your operation.*

SINGLE ALLEY

Our Single Alleys are designed in 7' sections to allow you to choose the length that best fits your needs.

A 3 section alley gives you the opportunity to curve your system in an "S" or "C" curve using a slide panel and frame. Alleys adjust from 19" - 28" depending on what you are processing.

*If one of our "pre-made" packages is not what you are looking for, customize by using the components to build your own!

* A consultation with one of our design specialists will ensure a configuration that is most cost effective and efficient for your operation.

DOUBLE ALLEY

A double alley works with cattle's natural herd instinct to travel as a group. This system set-up allows you to increase your cattle handling capacity while minimizing your space requirements, optimizes animal flow and can decrease the manpower needed to process your herd. The double alley includes the 7' transition into a single alley. Alleys are available with open rails (6,8 or 9 rail options)

** A consultation with one of our design specialists will ensure a configuration that is most cost effective and efficient for your operation.*

HYDRAULIC SQUEEZE CHUTE

2W's Hydraulic Squeeze Chute makes treating cattle more efficient and less stressful on both livestock and handler. The movement of the sides ensures that the cattle are balanced and comfortable in the chute. The controls are easy to navigate and the 8 feet of hydraulic hose allows them to be positioned away from the chute on either side.

HYDRAULIC SQUEEZE CHUTE

- 5 horse power motor
- Independent neck restraints
- Pivot control arm
- Palpation doors at rear
- Shock absorbing head gate
- Hydraulic moving floor
- Left or right side adjustable control arm
- Scales can go underneath

** A consultation with one of our design specialists will ensure a configuration that is most cost effective and efficient for your operation.*

MANUAL SQUEEZE CHUTE

The Manual Squeeze features a straight wall design which eliminates wedging and allows cattle to have a free movement forward. Both sides of the chute move in when squeezing, assisting in pushing the animal forward to reduce neck pressure.

MANUAL SQUEEZE CHUTE

- Self-catching head gate with neck extender
- Removable bottom panels
- Parallel axis squeeze
- No cables
- Tailgate locks in up and down positions
- Comes in either left or right exit option
- Inside dimensions are 8'11" x 34"

This chute has a self catching head gate and comes as left or right exit. Bottom doors drop down for easy access to hooves, side bars are removable and can create large or small access openings to the animal.

SPECIFICATIONS

Manual Squeeze Chute

Length 106" | Height 86.5" | Width 45.5" | Inside Dimensions 8'11"X 34"

BUD BOX / CROWD PEN

The term “Bud Box” describes a type of handling system preferred by low-stress livestock handling expert Bud Williams. By moving animals quietly and working them from their side where they can see you, will maintain quick and easier cattle flow into a chute for treatment, weighing, loading or any other processing task.

This system can be easily customized to fit with your existing handling facilities and is effective where you work with your livestock on foot, from horseback or both. Set ahead of a loading chute or squeeze chute, the Bud Box runs perpendicular to the alley leading to the chute or load out. Cattle are driven past the opening of the alley, and the gate is shut behind them by waiting a few seconds for the cattle to settle down, and applying pressure from the side of the Bud Box toward where you want them to go, the cattle will circle back toward where they came. At the time the cattle seek an escape route, which is the opening into the double alleyway, squeeze chute or load out.

How it works:

*** Ask us for more information on this style of handling. We will help provide helpful hints, insight and literature.**

- » Cattle want to go back from where they came
- » Give them a couple seconds to physically turn around before you pressure the cattle
- » The exit (alley/load out) should be as close to the entrance as possible
- » Cattle get to go around you - natural instinct
- » When you stand at the exit, their main concern or threat is you
- » Instead of making cattle go someplace, you are letting them
- » Bud Box should be a couple feet larger than alley to increase momentum to give them motivation to get out of that pen
- » Handler needs to work in the same quadrant that the exit (alley/load out) is in, so you are ahead of the cattle

CROWDING TUBS

The 2W Wrangler Crowding Tub offers the ultimate in safety and efficiency for handling your livestock. It has the versatility of a left or right flow and features a Positive Safety Latch, which can be locked back. Spreader bars on the top and bottom ensure stability and the 1/4" puck board lining adds durability and makes for a much quieter handling system. Available options include a fourth section and catwalk brackets.

*** A consultation with one of our design specialists will ensure a configuration that is most cost effective and efficient for your operation.**

HEALTH CENTRE / MATERNITY PEN

Easily operated by one person, the Health Center will be an excellent addition to your livestock operation. A calving or maternity pen is recognized by leading animal health professionals as one of the most important tools in assisting the already stressful and dangerous job of calving to make it much easier on you and your livestock.

DESCRIPTION

- » Animal Health Center is a pre-manufactured calving stall
- » The 10' x 8' pen allows easy installation into most existing ranch buildings, barns and corral systems
- » The pen consists of four main components that interlock
- » The High Pole Gate allows easy access for livestock
- » The squeeze panel is specially designed for accessibility when calving, and also for starting newborns to suckle

*** A consultation with one of our design specialists will ensure a configuration that is most cost effective and efficient for your operation.**

ARENA PANELS

GATES & PANELS

BACK PENS

BLOCK DOORS

» 2W works with a team of individuals with who have years of experience in the rodeo community. When designing our equipment, the safety of the rider and the livestock is always a factor we take into consideration.

» Crash pads and covers are available with our bucking chutes to give maximum protection to the rider when in the chute. The spacing between the rails and the ease of opening and closing the chute is to give the animal the safest possible setting. With 2"13 gauge tubing our equipment is made to withstand the impact of the sport.

» 2W has years of experience designing rodeo systems. We know every rodeo set-up needs to be customized to that particular arena, that's why we offer to help with the design process. We will assist you from the start to make sure the system meets all individual needs.

» Many Ag Societies across western Canada and the US use our equipment, including Nanton Ag Society, Ponoka Stampede, Innisfail Rodeo, Morris Stampede, and The Nile.

HERRINGBONE / ARROW PEN

Also known as “Arrow Pens”, they are used as the staging area for calves or steers to get them in order of performance. Choose a set of 4 gates or 6 gates (*2 sets of 4 recommended). The panels are built 5 feet high with 6 rail spacing so their heads cannot get through. Lead up alleys are 26” wide and the width of the pens are variable from 34” down to 26” depending on the angle you choose to use.

BUCKING CHUTES

Every rodeo arena needs a tough and durable set of bucking chutes to have their event go off smoothly and show off all the tough rough stock. We know you all want your events to go off without a hitch, which is why 2W Bucking Chutes are built with the rider, animal and “helpers” in mind.

DESCRIPTION

» Chutes can be purchased as single units or in banks (3 left and 3 right being the most common)

» Available with crash pads and covers

» Chutes have the “Pre-Load” on the swing gate. The “Pre-Load” actually pops the gate open and allows the gate man to remain in a safer position.

**Also available is portable bucking chutes where the Catwalk folds up for ease of transportation.

SPECIFICATIONS

Bucking Chutes

TIMED EVENT CHUTES

2W is now offering Chute Help equipment in Canada! The Chute Help Fully Automated Roping Chute is an innovative way to make roping simple. It features a mechanism which requires no electricity or compressed air, has a self-loading ability and is operated by a simple one button remote or by hand. The Chute Help is low maintenance, with easy clean out and saves time and installation costs - set it down and rope! The solar panel installed on each fully automated Chute Help extends the life of the 12v battery.

** Color will be bronze

ROUND PENS

2W builds round pens that can be customized to your individual needs. With a variety of panels to choose from, you can build your ideal pen to fit your style of training, space and animals. This will be an investment that is built to last generations.

SHEETED ANGLED ROUND PEN

SHEETED ANGLED ROUND PEN

We designed an angled round pen that allows you to get as close to the pen as possible with your horse. It is lined with puck board for a smooth surface and no place to get hung up in the pen.

» Panels are sheeted with 1/4" white puck board and are made of 2", 16 gauge tube and high pole gates are 2", 13 gauge.

Unit Number	Length	Description	Outside Height	Weight (Lbs)
3486	10 Foot	Round Pen Panel	84"	118
3487	10 Foot	Round Pen High Pole Gate	84"	248

LEMSCO MEDIUM DUTY ROUND PEN

Freestanding 2W Round Pens allow you to leave it in a permanent location or construct it where and when it is convenient for you.

» Variety of panels and gates to create Round Pens that can be customized for individual needs

» Panels are made of 1.5" 14 Gauge tube

VARIETY OF PANELS USED FOR ROUND PENS:

- SHEETED AREA PANELS
- LEMSCO MEDIUM DUTY PANELS (5 RAIL)
- CORRAL PANELS
- DIAMOND RANCH

THE MOST COMMON SIZE IS A 50FT ROUND PEN

LEMSCO MEDIUM DUTY ROUND PEN

CALCULATIONS

To determine the amount of panels you need for the size of your round pen take the diameter and times it by Pi then divide by the length of panels.

$$50' \text{ Round Pen} = 50 \times 3.14 = 157$$

$$157 / 10 = 15.70 \text{ (Round up to 16)}$$

HORSE STALLS

We value your horses comfort and safety as much as you do. Our horse stalls are known for their durability, security and high quality. Horse stall fronts and dividers are 7' high and available in 10' or 12' lengths.

THESE STALLS ARE A POPULAR CHOICE FOR EXHIBITIONS.
EASY TO MOVE AND STACK AND ASSEMBLE!

DESCRIPTION

- » Sheeted with ¼" puck board making the stalls easy to sanitize.
- » Choose how many 10' or 12' stalls you want
- » Available with a rolling door or a hinged door
- » Roof stall parts and tarps available
- » Panels are specially designed with connectors to interlock
- » Only one adapter post or wall mount bracket is required per group of stalls

WATERERS AND PARTS

2W is an authorized Canadian distributor for Hoskins stainless steel waterers and Petersen concrete waterers. We aim to stock parts and some waterers all year round.

Due to the Canadian dollar, please contact us for pricing and product stock.

You can visit us online for a list of current inventory.

- Heaters
- Elements
- Baffles
- Valves
- Hoods
- Thermostats
- Floats

Hoskins Manufacturing guarantees their waterers against rust, corrosion and normal livestock damage for 25 years. Hoskins further guarantees their products to be free of defects in material and workmanship.
